

## LIMITER AND WEIGHING WITH LOAD CELL

### TS-F Model

Limiters for cranes and lift systems with special tensile load cell TS-F model designed to be installed at the end rope.  
The load cell is connected to digital alarm unit CAM9N.

The load cell **TS-F** is shaped and designed to be installed at the end rope point of cranes; these load cells allow to reduce the overall height of the system,

The digit alarm unit **CAM9N** has three logic output as limiter; the unit is fully programmable by the local keyboard and display.  
CAM9N has serial and analogue output and can be used as weighing system.

The CAM9N can be wired to a large displays or other devices.  
Multiple CAM9N can be connected together to realize limiters or weighing systems in summary .

For technical detail of Load cell TSF and CAM9N unit, see the relevant technical data sheets.

**CAMI S.R.L.**
